Re: Sulfur Dioxide Contamination in St. Louis County

Dear Administrator Brooks:

St. Louis County recognizes that the ozone and particulate matter air pollution levels contribute more to mortality than the other National Ambient Air Quality Standards (NAAQS) contaminants. And, St. Louis County is aware that the St. Louis area is in attainment for the current sulfur dioxide (SO₂) NAAQS. But, St. Louis County is still concerned about the health impacts of the SO₂ levels within the County, especially those due to the contribution of Ameren's Meramec Power Plant – by far, the County's largest contributor of SO₂.

St. Louis County understands that EPA is currently pursuing litigation against Ameren for violations cited by EPA at several of Ameren's power plants in the St. Louis area. Due to the County's concerns about the health impacts of the SO₂ levels on the County's residents, St. Louis County would truly appreciate EPA VII's efforts to pursue SO₂ controls at the Ameren Meramec plant in its resolution of the litigation against Ameren.

I am thankful for EPA's pursuit of any conditions that result in a positive impact on the health of the residents of St. Louis County.

Sincerely,

A handwritten signature in black ink that reads "Charlie A. Dooley". The signature is written in a cursive, flowing style.

Re: Radium Contamination in Groundwater
Bridgeton/Westlake Landfills

Dear Administrator Brooks:

St. Louis County is aware that radium contamination has been detected in groundwater samples around the Westlake and Bridgeton Landfills. St. Louis County also understands that the radium contamination is not anticipated from the known contaminants deposited in those landfills.

The purpose of this correspondence is to stress St. Louis County's concerns about the source and extent of this radium contamination. St. Louis County recognizes that EPA VII is working with the environmental and health agencies of Missouri to try to resolve the radium presence. St. Louis County is also aware that the USGS is partnering with EPA VII on the Westlake efforts.

St. Louis County strongly encourages EPA VII to work with its partners to expeditiously determine the source and extent of the radium contamination as well as its acute and chronic health effects on the residents of St. Louis County, especially those in the immediate proximity of the two landfills.

We also continue to have great concerns regarding the subsurface smoldering event at the landfill and the potential environmental and health impacts this event has created.

My staff and I would appreciate a response and briefing about the efforts to date and planned efforts to alleviate our concerns. Thank you for your assistance.

Sincerely,

A handwritten signature in dark ink, reading "Charlie A. Dooley". The signature is fluid and cursive, with the first name "Charlie" being the most prominent.
